

# WebAPIs

This API provides the basic definitions that are used in all other Samsung Web APIs (Generic purpose Web APIs).

These include generic callbacks for error, the WebAPIError class and object filters. Additionally, this API also specifies the location in the ECMAScript hierarchy in which the Samsung Web APIs are instantiated (window.webapis).

## **AttributeFilter**

AttributeFilter represents a filter based on an object attribute.

## **AttributeRangeFilter**

A filter which matches objects containing an attribute whose values are within a particular range.

## **CompositeFilter**

CompositeFilter represents a set of filters.

## **SimpleCoordinates**

SimpleCoordinates represents a coordinates with latitude and longitude.

## **SortMode**

SortMode is a common class used for sorting of queried data.
