

network

This class provides network setting information(ip, dns(domain name server) address, gateway address etc.) and methods which can set these.

Add the following line for network class into a html file your own :

```
<script type="text/javascript" src="$MANAGER_WIDGET/Common/webapi/1.0/webapis.js"></script>
```

You can declare network class like this :

```
ex) var network = webapis.network;
```
