

Event Handler

"Event Handler" feature of Caph Framework provides event handling functions, which can be an essential building block of a Web application.

- All classes in "Event Handler" feature use the "caph.app.event" namespace.

caph.app.event.EngineEventHandler

This document is to explain caph.app.event.EngineEventHandler.

caph.app.event.PerfEventHandler

This document is to explain caph.app.event.PerfEventHandler.
