Description of Application Manager.

Contents

## [Application Manager Views](#)

Application Manager is a part of the Smart TV that handles many application-related tasks. It is continuously updated via the Internet.

The following are some of the tasks that Application Manager handles:

### **Install, run and delete applications**

#### [Manage user accounts](#)

Application Manager provides Single Sign-On (SSO), which encrypts and saves user account information and sends it to the application.

#### [Run and manage applications](#)

Application Manager provides the [common modules](#) that enable applications to run normally on the screen, recognize and identify remote control button events, use plugins, and communicate with the Application Manager. Application Manager provides the modules for processing all the details of device-side Samsung Application Push (SAP).
