Application Development Process

Published 2014-10-28 |

> Description of Samsung Smart TV application development process.

Samsung provides the tools required to manage your application's life-cycle from product conception, through development and release, to end-of-life application retirement. The following figure illustrates the process of developing a Samsung Smart TV application.

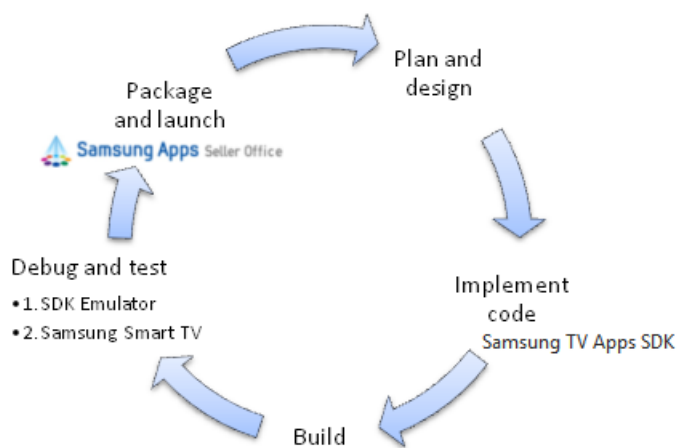

Figure. Application development process

To develop a Samsung Smart TV application:

1. Plan and design your application and application UI.
2. Implement code.
3. Debug and test your application.
4. Package and launch your application.

Once your application has been certified and published, you can continue to manage its content by choosing to:

Upgrade your application.

Remove your application from **Samsung Apps** through the **Samsung Apps Seller Office**.
