Project Types

Introduction to different project types available on Samsung Smart TV platform.

When developing Samsung Smart TV applications, you can choose between the following project types in the Smart TV SDK:

Basic

The Basic project gives developers the opportunity to create their application using the Visual Editor.

JavaScript

The JavaScript APIs provide low-level platform functions that give you greater control over application tasks and processes.

Flash

Samsung Smart TV supports the use of Flash functionality in applications. Use standard Flash functions and implement these Flash components according to the models provided in the Flash tutorials.

To select a project type:

1. Open the Samsung TV SDK.
2. In the SDK Editor, select File->New->New Project. The available project types are displayed:
   Basic
   For more information, see How To Create A Multi-Scene Basic App Project.
   JavaScript
   For more information, see Coding Your JavaScript Application.
   Flash
   For more information, see Flash.

For more information about working with the different project types, see Implementing Your Application Code.
