[Getting the Product Type](#)

Sometimes, it is necessary for the application to distinguish between different types of platform (whether it is a TV, BD, etc.). In most cases, this feature is needed for different settings of the volume control.

Note

The files needed for the sample application are [here](#).

Getting the Product Type

Here is the guide to check the product type code:

1. In index.html.

```
<script type="text/javascript" language="javascript" src="$MANAGER_WIDGET/Common/webapi/1.0/webapis.js"></script>
```

2. Call the [getProduct](#) function inside your javascript code. For example:

```
alert('Device type: ' + deviceapis.tv.info.getProduct());
```

3. The value returned by the function is interpreted as follows:

```
0 - PL_TV_PRODUCT_TYPE_TV
1 - PL_TV_PRODUCT_TYPE_MONITOR
2 - PL_TV_PRODUCT_TYPE_BD
```

Note

For the SDK emulator, this function always returns fake PL_TV_PRODUCT_TYPE_TV
