

Retrieving Additional Information

Published 2014-10-27 | (Compatible with SDK 2.5,3.5,4.5,5.0,5.1 and 2011,2012,2013,2014 models)

List of attributes which can be retrieved by Application Manager

The Application Manager gives you additional information while running an application, for example:

[Country Code](#)
[Language Code](#)
[Product Category](#)
[Region Code](#)

The application gets such information by referring to window.location.search. In the example below user ID and password entered via [SSO](#) or TV language information is available.

?country=US&language=1&modelid=Valencia&server=development&remocon=2_35_259&area=USA&product=1&mgrver=3.000&id=ori590e@exxx.com&pw=pxxx&payload={key1:value2,key2:value2}

Attribute	Value	Description
country	Country Code	Country code that has already been assigned.
language	Language Code	Replaced with lang attribute
modelid	Digital TV Model ID	Digital TV Model ID
server	Server type	operation, development
remocon	-	No use
area	Region Code	Region code that has already been assigned.
id	string	Id inputted in SSO. It is passed only while entering application after sign-in. It should be used after calling decodeURIComponent().
pw	string	Password inputted in SSO. It is passed only while entering application after sign-in. It should be used after calling decodeURIComponent().
product	Product Category	The type of product (for example, TV or monitor).
mgrver	Samsung Smart TV version	If your application is enabled after a specific version of Samsung Smart TV, check mgrver.
payload	string (JSON)	Extra Information for specific service. It is passed only while entering application after push notification. It should be used after calling decodeURIComponent().
