[Solution](#)

[Bad example](#)

[Good example](#)

This issue occurs when:

- a table is put inside a floating box
- width of parent, table and table cell is defined
- table width is set to 100% and table cell width is smaller than parent

Webkit 2012

Table width is specified by size of the table cell.

1111

Maple 2010-2011

Table width is specified by the value defined for table

1111

Solution

Avoid the float property of any elements.

Bad example

```
<div style="width: 400px; height: 30px;">
  <div style="float: left;">
    <table style="width: 100%; border: 1px;">
      <tr>
        <td style="width: 200px; height: 50px;">
          <div>1111</div>
        </td>
      </tr>
    </table>
  </div>
</div>
```

Good example

```
<div style="width: 400px; height: 30px;">
  <div>
    <table style="width: 100%; border: 1px;">
      <tr>
        <td style="width: 200px; height: 50px;">
          <div>1111</div>
        </td>
      </tr>
    </table>
  </div>
</div>
```
